

4 ways you can upgrade CompacOnline

for greater benefits, service & security

Option 1: Enable grade restrictions on sites through CompacOnline

- Restrict account cards to certain fuel types helps prevent:
 - a) miss filling of vehicles (eg petrol in a diesel car, jet fuel in an avgas plane)
 - b) employee fuel theft (they can only take the fuel you allow them too)
- Increases safety around alternative fuels (LPG and CNG require special training to refuel with - only trained employees/customers can be allowed to use these fuels)

Option 2: Enable sites for Motorpass & Motorcharge cards

Option 3: Enable prepay cards at sites and on CompacOnline

- Allows site owners to have their customers prepay for fuel
- Allows employers to restrict the amount of fuel employees can take
- Works across multiple sites so the card balance can be drawn down from any site on your network

Option 4: Change from Netbase to CompacOnline

- No new hardware needed!
- 24/7 remote access to site data
- Access site information using your internet browser
- Update, download and manage site data in real time
- 100% secure

Contact Compac to activate any or all of these options
